

DATE

Dear :

The results of the continuous radon monitoring conducted for you at (address where work completed) after completion of the radon mitigation project indicated an average of (post test radon reading) pCi/l in the basement of the residence. **Please note that turning off the radon mitigation system will void the fan warranty!**

Our test results accurately reflect the average radon concentrations for the tested environment only for the test time period. Radon concentrations can increase or decrease by several factors depending upon such conditions as temperature, weather, barometric pressure, ventilation, living habits, and the season. Radon Systems makes no warranty of any kind, expressed or implied, for the consequences of erroneous test results because of these factors listed above. We recommend that further measurements be made to determine the annual average of exposure. Neither Radon Systems nor its employees or agents will be liable for any interpretation, consequences, or actions resulting from or sustained as a result of any radon test requested. **These results are confidential and will not be released to anyone else without your permission.**

If you have any questions about the results or would like to discuss the services offered by Radon Systems, please do not hesitate to call.

Very truly yours,

Danny R. West
President
